

IAML Conference, Rome, Italy, 3–8 July 2016,  
Auditorium Parco della Musica

**Online access to the collection  
François-Joseph Fétis (1784–1871):  
challenges and difficulties of an  
outstanding digitization project**

Frédéric LEMMERS  
Royal Library of Belgium  
Brussels

# Content

1. The Collection FETIS – Key figures
2. The full treatment of the collection
3. Image capture : subcontracting & KBR DIGIT department
4. Difficulties
5. Valorization in question

# 1. The Collection Fétis – Key Figures

- 3.494 music sheets and printed volumes
- 2.244 music manuscripts
- 1.593 bibliographic units of bound volumes (covering philosophy, theology, philology, mathematics, poetry, history and music)

→ Estimated 1.000.000 pages

- Mandatory source for the study of the ancient music history
- Many unique ancient music editions
- Many music sheets autographs (J.S. Bach, B. Galuppi, Haendel...)

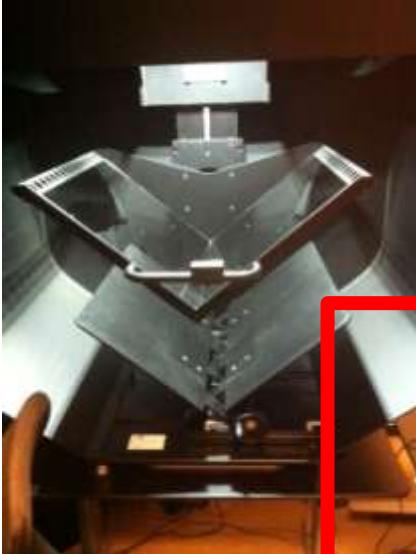

## 2. The full treatment of the collection

- Verification of the physical state of the volumes
- Metadata verification, metadata enriching, several levels of description (bound volume, bibliographic unit)
- Selection of the best image capture channel
- Image capture + Image processing + METS XML
  - Intern production follows **Metamorfoze** recommendations
  - Production of **permalinks** (UURL database)
- Quality control
- Preparation of a “SIP” with all files and metadata for digital archive and online publication
- Valorization via KBR Digital dissemination channels & exports of datasets to aggregators and digital portals

### 3. Image capture : subcontracting & KBR DIGIT department

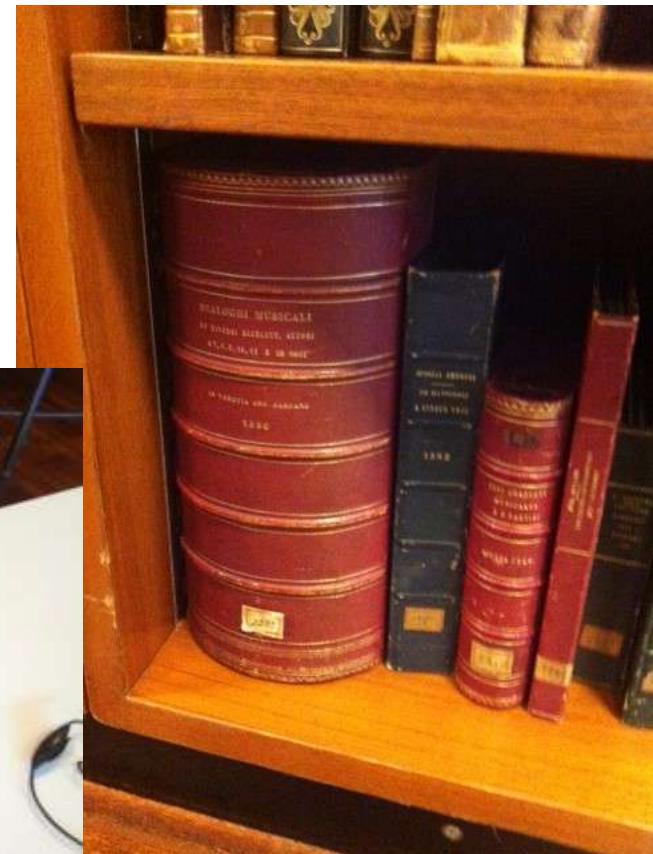

- Part of the Federal Digitization Program (DIGIT-03) (2015-2018)
- Part of lot 3 - “precious and fragile paper collections”
- Subcontracting: 308.000 scans for KBR (2015-2016)
  - Inside the library’s building
  - Preparation, metadata, quality control, reject nor acceptation : KBR
  - Image capture and image processing : subcontractor
  - All difficulties are rejected by subcontractor
- Intern production by the KBR DIGIT department : availability of a large scale of machines
- Running project for many years (2018)

### 3. Image capture : subcontracting & KBR DIGIT department

# 3. Image capture : subcontracting & KBR DIGIT department

- How to manage this diversity of supports ?

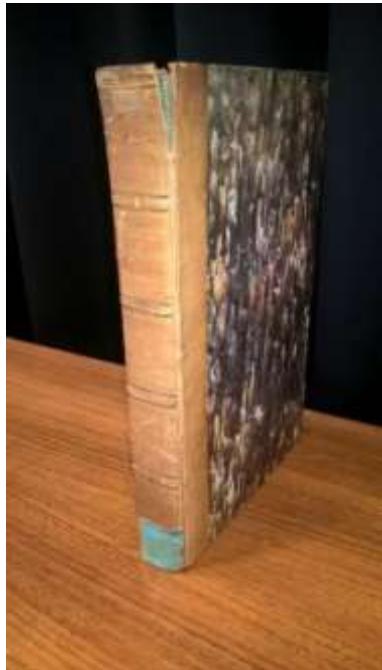

### 3. Image capture : subcontracting & KBR DIGIT department

- Ex. Ms II 3843 Mus. (IDN : 2169525) : Pseaumes mis en musique et écrits en 1545 par la princesse Anne Marie de Brunswick, épouse d'Albert de Brandebourg

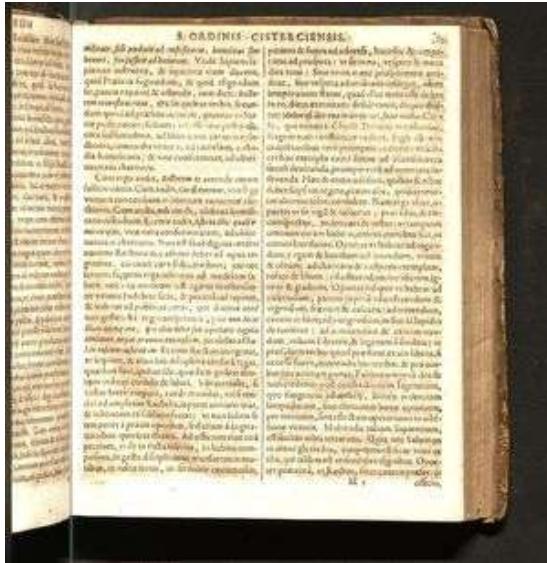

## 4. Difficulties – fragile bound volumes

- Destroyed backs
- Scanning restrictions: bindings opened up to max 110°
- Risks of deteriorations → scanning takes time

# 4. Difficulties with image capture – quality control

- Overexposure ; colour white balance; no colour ICC profile
- Too much pressure with the glass on the binding
- Automatic deskew software made interventions based on the edge → page is not horizontal
- Bad skew and crop thanks to automatic post-processing softwares

# 4. Solutions

- Importance of preparation
- Impact of the chosen material for scanning on the post-processing
- Set up of ICC profiles; definition of correct lighting conditions

# 5. Valorization in question

- You know the source you are searching for...  
→ [OPAC](#) and [Digital Library](#)  
→ RISM OPAC
- Further valorization perspectives ; many possibilities
  - Several volumes for one unit
  - Several units into one single volume
- [Ms II 3868 Mus Fétis 1830](#) (A. Scarlatti, Messa | a 5 e 7 voci | di Alessandro Scarlatti | 1705 | Alessandro Scarlatti, Königl: Capellmeister zu Neapel Geborne 1658, gestorben 1728)
- Direct access to CREDO : <http://uurl.kbr.be/1541191/p23>

# 5. Valorization in question

Other examples

<http://uurl.kbr.be/1541199>

<http://uurl.kbr.be/1541225>

<http://uurl.kbr.be/1287035>

Need to further tools development  
according to the IIIF standard  
(International Image Interoperability  
Framework)
